## What is claimed is:

1. A shoe structure, comprising a sole, a heel, and a vamp adapted to enclose at least part of a wearer's foot; said sole having a reinforcing plate embedded therein to extend from a rear end to a near-middle point of said sole to bear a downward force from a suspended rear half of the wearer's foot, and said heel having a cushion pad connected to a lower end; said shoe structure being characterized in that:

said sole is provided at said rear end above said heel with a recess for receiving a fixing plate therein, two through holes are correspondingly provided on said fixing plate and said reinforcing plate for a screw to downward extend therethrough into said heel, and that said heel is internally provided with an internally threaded tube for engaging with said screw.
